- ◀ Slip Mode for enhanced scratching ▶
- ◀ Advanced Beat Loop Selector ▶
- ◀ High Performance DAC / Sound Quality ▶
- ◀ Quantize Looping ▶
- ◀ Midi & HID control via USB ▶

CDJ-900

natural selection

A new species of CDJ has arrived. Introducing the CDJ-2000 & CDJ-900 multi-format players. Designed for the ever evolving needs of DJs, the new CDJs handle all major music formats from multiple sources including USB memory devices.

DJ set preparation has been revolutionised by rekordbox™ music database management software. DJs can utilise a beat grid view of their tracks to set accurate cue data and access features like multiple Hot Cue Banks** as well as Quantize for perfect loops. This data can then be exported to the CDJ via portable USB memory devices to enable a vast library of music and a live performance without the need for additional hardware or a complex setup.

The Pro DJ Link allows music files on a single USB/SD device to be shared by up to four other players. The CDJ-2000 includes many advanced features including Needle Search™ which gives an instant preview of any point in the track by sliding a finger along the Needle Drop pad. With a new standard in sound quality, a built-in 24-bit/48 kHz soundcard and a large full colour display** for intuitive music management, the new CDJs have evolved to become the natural selection for the new breed of professional DJ.

rekordbox™ is music management software designed to make set preparation a breeze. Set cue points and perfect quantized loops from the beat grid display into the music files then export to USB storage device or SD memory card, ready for performance.

* rekordbox™ software for Mac and PC is included with every CDJ-2000 and CDJ-900. ** Applies to CDJ-2000 only. The CDJ-2000 and CDJ-900 offers native support for both Serato and Traktor DJ software via HID connection.
